MICHELL'S "EVERGREEN" SEED GARDENS

This new institution, situated just above Torresdale, Pa., on the New York division of the Pennsylvania R. R., was inaugurated by us a year ago, and its success is plainly visible by the above illustrations. Now that our facilities are perfect, we can truthfully claim to be in position to give each customer entire satisfaction, such as human possibility could suggest. Every seed we send out hereafter will have been tested with our latest devices (the most natural method) and must give **absolute satisfaction**, hence our "**distinctive quality**."

By our careful trials we can quickly detect all inferiorities, if any, and dismiss them from our stock, thereby retaining only the most superior strains, hence again "**distinctive quality**." **ALL THIS FOR THE BENEFIT OF OUR CUSTOMERS.**

Here we also grow in charge of experts all plants offered in our catalogue, which enables us to furnish to our customers stronger and better specimens than they can usually obtain.

For the season of 1911 we shall have seasonable displays of all worthy flowers, and extend a hearty invitation to all our friends to visit at least once a month.

"ALFALFA SEED" FOR THE FARM

Alfalfa should be one of the staple crops on every farm. If you have not yet grown it, the sooner you do so, the more money you will make in farming. Our Alfalfa is repeatedly tested for vitality and purity, and we are gratified to say that it is invariably as near the 100% mark in purity and growth as it is possible to come.

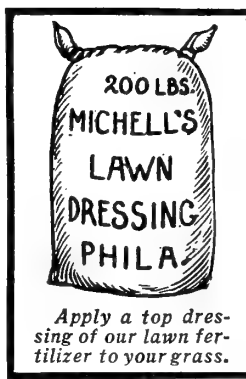

Our Dutch Bulbs of which we import millions, arrive in September.

SEPTEMBER

Sow Pansy, Forget-Me-Not and English Daisy if you have a cold frame, also sow Lettuce and Cauliflower for a fall or early winter crop; also Winter Radish, Endive, Parsley, Spinach, Corn Salad, Kale and Turnip. REAL NOVELTIES IN FLOWERS FOR 1911

When we claim to offer real Novelties it means they are distinctly new and possess merits worthy of anyone's trial. To deserve our claim for progressiveness we realize we must be the first in the field to offer the latest introductions of the hybridizer, yet we must be jealously careful in our selections from the hundreds of offers to guard against disappointments, and for this reason alone our list may be small compared with others, but we are proud to say, there can be none better.

Antirrhinum—Giant Double White

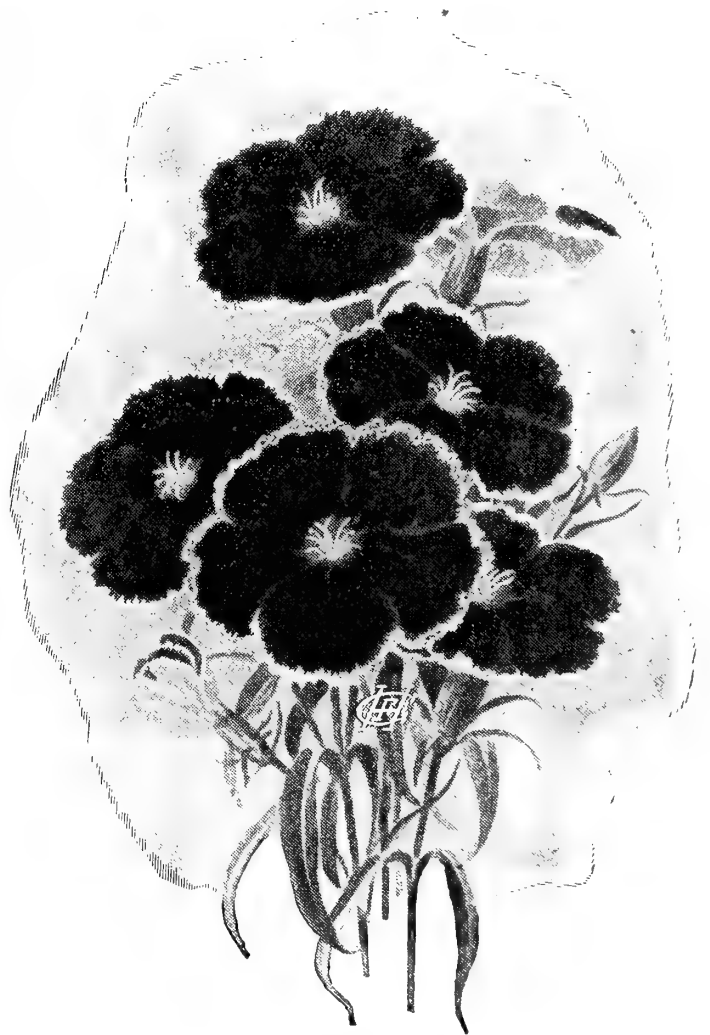

NEW ANTIRRHINUM (Snapdragon)

GIANT DOUBLE WHITE

A new form of flower, see illustration to the left, from the mouth-like aperture between the upper and lower lips emerge abnormal petals, which give the flower a new aspect; due to this abnormality the flowers are very large; a vase with several spikes looks very striking and we believe it will become a fixed favorite with the gardening public. The variety we offer herewith is of pure white color. Per pkt. 25c., 65c. for 3 pkts.

NEW ASTER, LADY ROOSEVELT

We can truthfully claim that this is the finest of all Asters. The flowers resemble huge incurved Chrysanthemums; the color is a gorgeous pink, of marvelous beauty. The robust plants produce stout stems invariably 40 inches long, crowned with gigantic flowers. The seed we offer is selected from original specimen and then re-cleaned; so it must give absolute satisfaction. 65c. large pkt., pkt. 25c.

NEW DIANTHUS, "SILVERLACE"

A new garden pink, with distinct merits both for cutting and garden effects. The small bushes flower richly and willingly with medium-sized flowers. The flowers are dark blood red with a uniform white edge round the whole flower, which is slightly fringed. Per pkt. 25c., 65c. for 3 pkts.

Please consult Special Index Page 51 to locate promptly the Flower you are looking for.

REAL NOVELTIES OF FLOWERS FOR 1911

(CONTINUED)

NEW ESCHSCHOLTZIA, BURBANK'S CRIMSON

California Poppies have always been popular garden plants, but their variation in colors is rather limited; many have tried to produce a real red flower but not until now can this claim be made by Mr. Burbank; the flowers of this novelty are quite large and of a rich deep crimson. Per pkt. 15c., 40c. for 3 pkts.

New Hybrid Freesias

NEW HYBRID FREESIAs In All Colors

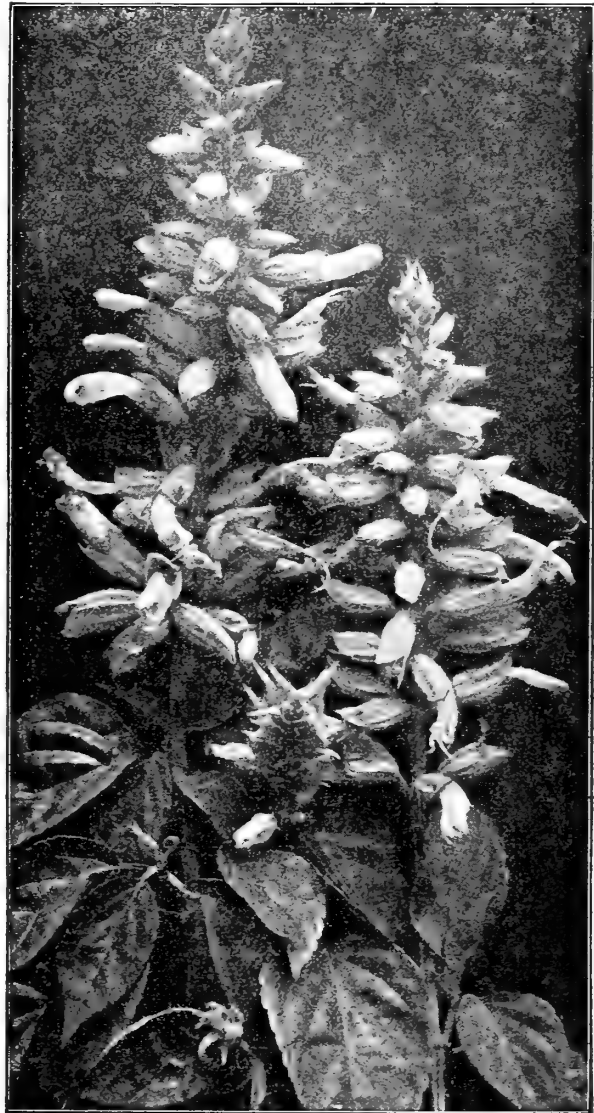

For centuries we have only known the white and light yellow Freesias; about five years ago the horticultural world was surprised with the news that a French hybridizer had successfully crossed some of the African species with the regular sorts, and as a result we are able to offer to-day Freesias in all the colors of the rainbow; the supply of the bulbs is as yet far too limited to be offered in general, and we are pleased to think that we are able to offer seeds of this sensational novelty. Seeds should be sown in the house and with proper care many of the seedlings will flower within 8 months from the date of sowing. The following colors may be expected to be among the seedlings: All shades of pink, red, lilac, violet, yellow and orange. Per pkt. 30c., 80c. for 3 pkts.

NEW DOUBLE "BABY'S BREATH" GYPSOPHILA PANICULATA, FL. PL.

The doubling of the flower gives it a distinct yet handsome appearance. The plants flower so free that a small branch cut with highly colored sweet peas gives it the appearance of a multitude of miniature snowflakes gracefully floating over the surface. This variety is perennial and once established it will last for years. Height, 3 feet; season, July and August; color, pure white. Per pkt. 30c., 80c. for 3 pkts.

NEW DWARF "WHITE" SALVIA, SALVIA SPLENDENS COMPACTA ALBA

We have long wished for some suitable edging plant for the popular scarlet sage, and this novelty surely must be called ideal for this purpose. Of compact, dwarf growth, the pure white flowers cannot help but make the taller scarlet sage exceedingly brilliant and attractive. Per pkt. 30c., 80c. for 3 pkts.

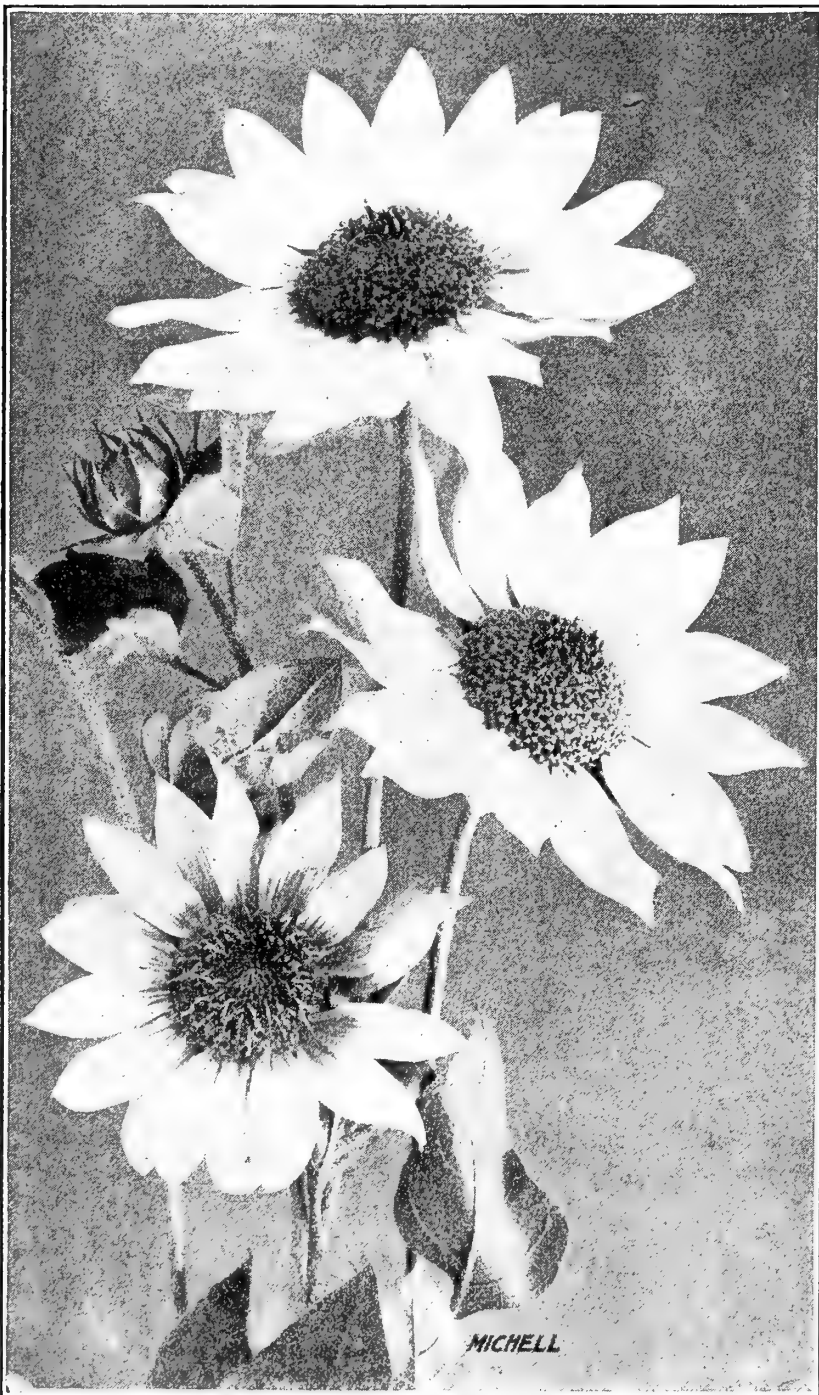

Salvia, Canary Bird

NEW "YELLOW" SALVIA "CANARY BIRD"

Gold and scarlet have always been happy contrasts. To edge or mix a bed of scarlet Salvia with this new color will mean a wonderful attraction; the bright golden flowers are supported by dark green foliage. Per pkt. 25c., 65c. for 3 pkts.

Please consult Special Index Page 51 to locate promptly the Flower you are looking for.

REAL NOVELTIES IN FLOWERS FOR 1911 (Continued)

NEW ANNUAL RED SUNFLOWER

(*Helianthus Cucumerifolius Purpureus*)

Of miniature type the plants of this novelty present a most striking appearance on account of the unusual color of the flower. The bushes which branch very freely are literally covered all summer with flowers measuring $2\frac{1}{2}$ to 3 inches in diameter and glorying in a series of shades from pink to purple; even the form of the petals vary, some are straight, others twisted and others curled. Sow seeds outdoors early in May and transplant to stand 10 inches apart; splendid for cutting or effect as hedges. Per pkt. 25c., 65c. for 3 pkts.

SWEET PEA MARTHA WASHINGTON

Pearl white, flushed with pink deepening toward the edges. Pkt. 25c., 65c. for 3 pkts.

"Doris Burt"

FIVE NEW "SPENCER" SWEET PEAS Of "Distinctive" Merits

"Spencer" Sweet Peas are distinguished by their most exquisite form of flower, a wavy petal; their wonderful vigor in plant, stem and flower, and their ability to produce, as a rule, 4 gigantic blooms on one stout long stem.

ETHEL ROOSEVELT

The largest and most perfect Spencer form. The color is soft primrose, flaked daintily with crimson. Original pkts. (10 seeds), 15c. each. Original pkts. (20 seeds), 25c. each.

FLORENCE NIGHTINGALE

Flowers frequently measure 2 inches across; the color a soft but rich lavender. Original pkts. (10 seeds), 15c. each. Original pkts. (20 seeds), 25c. each.

DORIS BURT

Most brilliant scarlet, the only variety which will not burn in the sun; of immense value. Pkt. 25c., 65c. for 3 pkts.

DOUGLAS UNWIN

The finest maroon so far introduced; an immense flower of bold appearance. Oz. \$1.25, pkt. 25c., 65c. for 3 pkts.

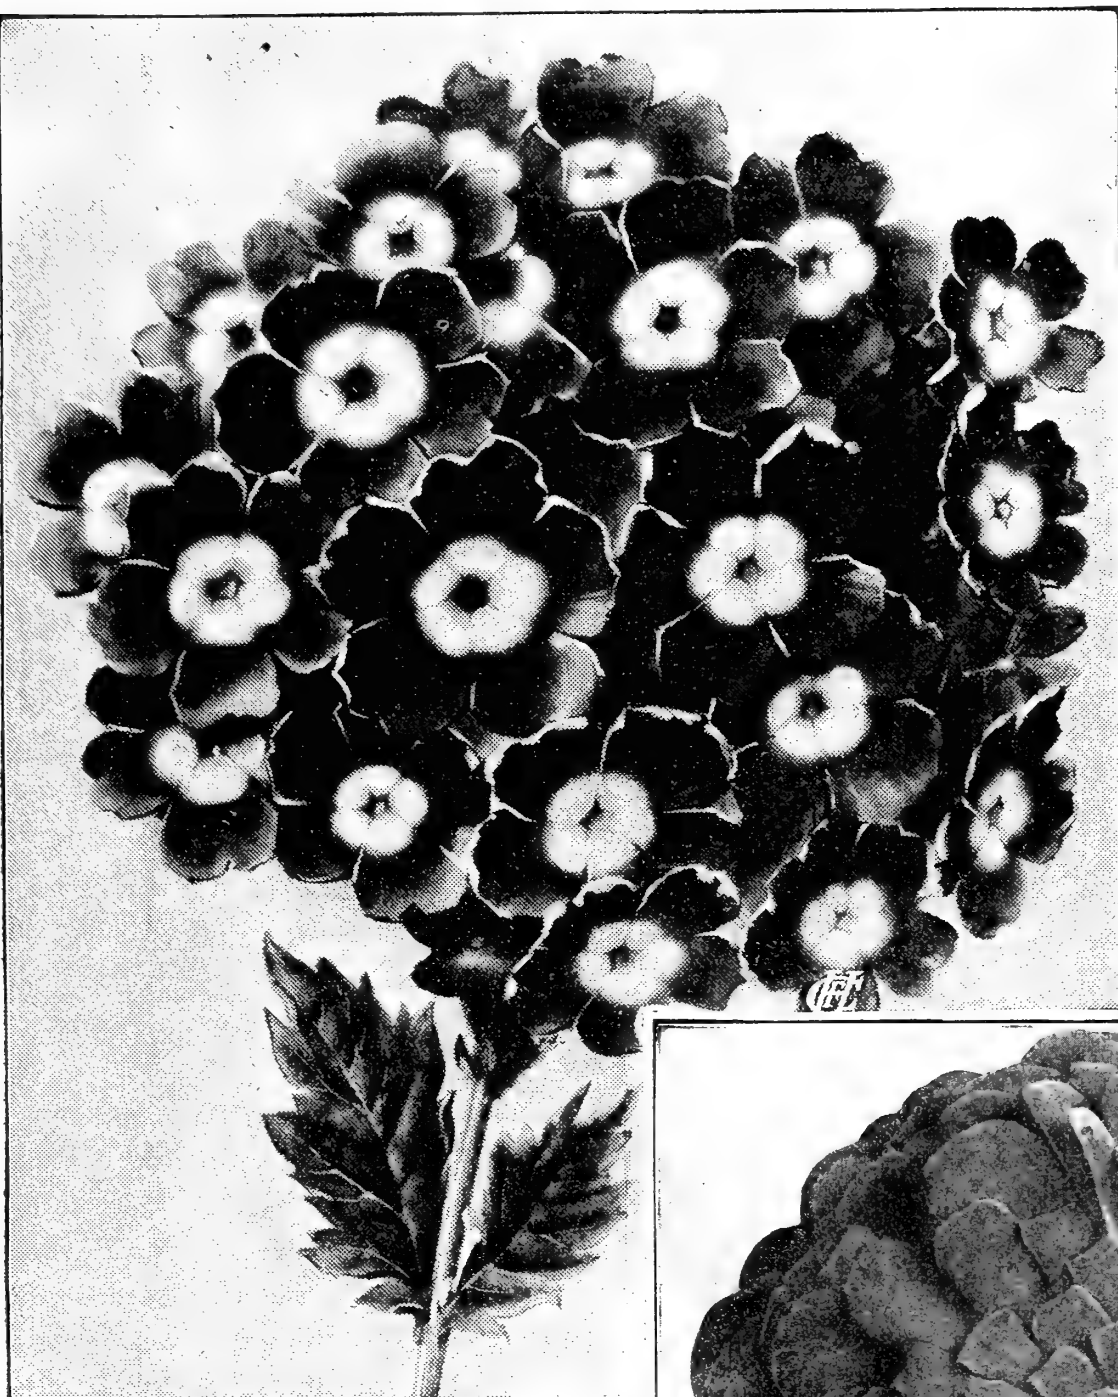

Please consult Special Index Page 51 to locate promptly the Flower you are looking for.

New Giant Robusta Zinnia

This new form is a wonderful advance in size and shape and gives the plant a most majestic appearance. The plants grow extremely robust to a height of 2½ feet, have stout straight stems dressed with large broad foliage and crowned with a gigantic perfect double flower often measuring 5 to 6 inches across; a revelation to all who are accustomed to the common Zinnia. Splendid for cutting or garden effect.

NEW GIANT FLOWERED VERBENAS

IN DISTINCTLY NEW COLORS

Verbenas are among the most useful of garden plants; they are of easiest possible culture and once they begin to bloom, which is very early, they never cease to bloom until the most severe frost kills it. The novelty we offer herewith is not only distinguished by its giant blooms made attractive through a light-colored centre and an exquisite edge of silvery white, but an entire new range of colors, such as Tyrian Rose, Purple Garnet, Turkey Red, Geranium Red, Rosy Scarlet, etc. To make Verbenas flower early, start seeds in the house from February till April; it may also be sown outdoor from May onward and will then flower in August and continue till frost. Height, 1 foot.

Mixed Colors. Per pkt. 30c., 80c. for 3 pkts.

NEW CHRYSANTHEMUMS

THE WELLS-POCKETT-TOTTY SET FOR 1911

MRS. G. C. KELLY

This variety will, next year, be the centre of attraction at the exhibitions, as has been Mrs. David Syme during the season just closed. The color is old rose with a silvery reverse. In size the flower is one of the very largest. Its general make-up and finish is perfection. The stem is stiff and the foliage well up. This is a variety that is destined to make its mark and add more laurels to the name of Mr. Pockett.

Per plant, \$2.00; \$20.00 per dozen.

WILLIAM TURNER

A splendid variety to which no picture does begin to do justice. It will rank among the very largest, and another year, when well grown from early stock, may be the leader of its color. It is a true Japanese reflexed and the petals hang down to meet the foliage. Purely an exhibition variety, but one well worthy of the grower after whom it is named. Crown bud August 15th and later.

Per plant, \$2.00; \$20.00 per dozen.

HARRY E. CONVERSE

Chestnut crimson with bronze reverse. By the time the flower is finished it makes a perfect ball of shining bronze. This is a magnificent variety with very heavy stem and foliage, running six feet high with us this year. It will rank as one of the very best in its color on the exhibition table, either in the long or short stem classes. The best flower with us developed from a bud taken August 20th.

Per plant, \$2.00; \$20.00 per dozen.

F. T. QUITTENTON

A deep crimson, every petal of which naturally reflexes, showing the color to the best advantage. This is a particularly strong grower, conforming in all respects to what is latterly considered the Wells-Pockett type, short-jointed, heavy growth and perfect foliage. F. T. Quittenton does not burn a petal and on that account alone will rank well in the list of crimsons. Do not take bud before August 25th, as earlier buds are so crowded with petals that they cannot properly develop.

Per plant, \$2.00; \$20.00 per dozen.

E. M. BYRNES

Glistening scarlet-crimson, easily the most striking variety in my collection this year. The flower is not large, but the wonderful color is so effective that it can be seen all over the house, as it makes all other crimsons look black and dead by contrast. Will not damp a petal, which is a great recommendation in its favor. Bud from August 20th on.

Per plant, \$2.00; \$20.00 per dozen.

LADY CARMICHAEL

Pure white Japanese reflexed with perfect foliage and stem like an iron rod. This variety was really planted too late to be shown at its best. Next year it will unquestionably find its place very near the top in exhibition whites. Bud August 25th.

Per plant, \$2.00; \$20.00 per dozen.

AMERICAN SEEDLINGS—INTRODUCTIONS OF 1910

F. E. NASH

Light pink Japanese. Certificated by C. S. A., New York. Raised by A. J. Loveless. A very handsome heavy-growing variety that will easily make its mark. Take bud not earlier than August 20th to get the best colored bloom.

50c. per plant; \$5.00 per dozen; per 100, \$35.00.

ALICE M. FLAGLER

Pure white Japanese incurved, perfect stem and foliage and one that in an average season should rank very high. It might be described as a very much improved Mrs. Robinson, with a heavier stem. Crown bud August 20th.

50c. per plant; \$5.00 per dozen; per 100, \$35.00.

PIONEER

A beautiful soft pink with wide petals, toothed at the ends, giving the flower a very pleasing effect and apparently the pioneer of a new type, nothing like it in form at the present time; a new departure and sure to become a favorite.

A good grower and builds a good flower on any bud. Exhibition and commercial.

50c. per plant; \$5.00 per dozen; per 100, \$35.00.

For a complete collection of all worthy tender Chrysanthemums see Page 96.

Plants Ready March 1.

NEW AND RARE ROSES FOR 1911

During the last ten years wonderful strides have been accomplished in improving the undisputed "Queen of all flowers" by the world's hybridizers. Much credit reflects upon the American breeders, who have won many laurels in competition with our European experts. The newer roses which we offer are a selection of the very choicest.

NEW EVERBLOOMING HYBRID TEA ROSES

This class of roses will in near future supplant all other dwarf roses, because it possesses all the ideal qualities a rose ought to have: Beautiful form, sweet fragrance, luxuriant glossy foliage, delicate tints and shades, and continuous blooms, are only the main recommending features. To enjoy beautiful long-stemmed roses during every month from June till frost is only possible when one restricts the selection to this class alone.

Alice Lindsell. Creamy white with pink centre, large full flowers with petals of great substance of vigorous growth and very free in blooming. Each 75c., doz. \$7.50.

Dean Hole. Silvery carmine, shaded salmon, very large, full flowers with high centre; a splendid rose for cutting. Each 75c., doz. \$7.50.

Florence Pemberton. Creamy white, edges of petal slightly tinted pink, large and full. Each 75c., doz. \$7.50.

General McArthur. Large full flowers of great depth; color, bright, warm red. Each 75c., doz. \$7.50.

Madame Ravary. Beautiful golden yellow, long pointed buds opening to large full orange yellow flowers; very free \$0.75 \$7.50

Mrs. Peter Blair. Flowers of medium size and good shape; color, lemon chrome with golden centre.... .75 7.50

The Lyon. Long coral red buds opening to very large globular flowers; the edges of petals are shrimp pink, centre coral red or salmon pink, tinted with chrome yellow at the base; a most charming variety75 7.50

Special Offer: The "Novelty Collection" of one each of above nine roses for 6.50

All Roses Furnished from 4- or 6-inch Pots.

New Climbing Roses

The newer introductions in this class are very desirable and will soon be popular with every garden.

American Pillar. A rapid climber with lustrous green foliage; the flowers are large, single and borne in clusters; color, a chaste shade of pink with bright yellow stamens. In the fall the plants are covered with bright red seeds trips. Each 60c., doz. \$6.00.

White Dorothy Perkins. A pure white sport of the well-known Dorothy Perkins, having the same habit of growth and freedom of flowering. It is, in fact, the first desirable double white climbing rose in existence. Each 60c., doz. \$6.50.

Veilchenblau (Violet Blue). A most sensational novelty. A strong grower, the plants when in full bloom are covered with large clusters of violet blue flowers. The buds open in what may be termed as violet red and when fully expanded they assume a violet blue color; the effect is unique and striking. Each 75c. doz. \$8.50.

MERITORIOUS NOVELTIES IN VEGETABLES

If any Peas or Beans are wanted by mail, add 8 cents per pint or 15 cents per quart for postage.

NEW PEA, "NEGRO"

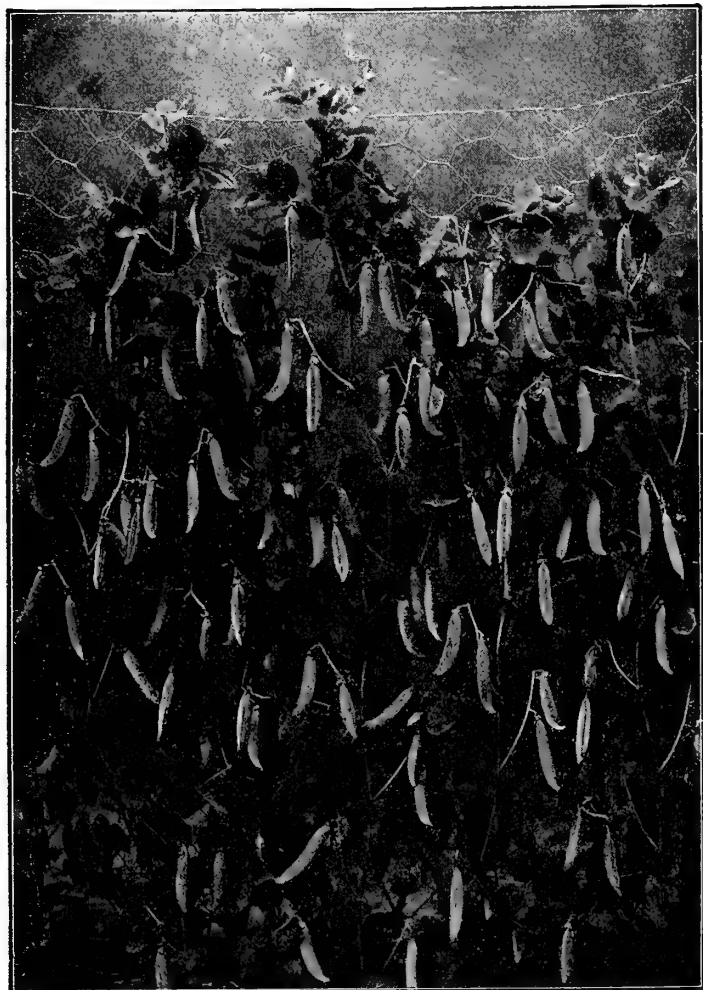

An exceptional novelty, vigorous vines of 3 foot height, produce innumerable pods of fully 3 inches in length, of a deep violet blue color, while the peas are of a light green. The pods appear early and the fruit has a most delicious flavor. NEW PEA "SAXONIA"

One of the earliest Peas yet, producing pods from 3½ to 4 inches in length; plants grow 2 feet high, of healthy, vigorous growth. It is a white-seeded, round-podded Pea, and its productiveness is its main feature.

MUSK MELON OR CANTALOUPE

Melone (Ger.)

Melon Muscade (Fr.)

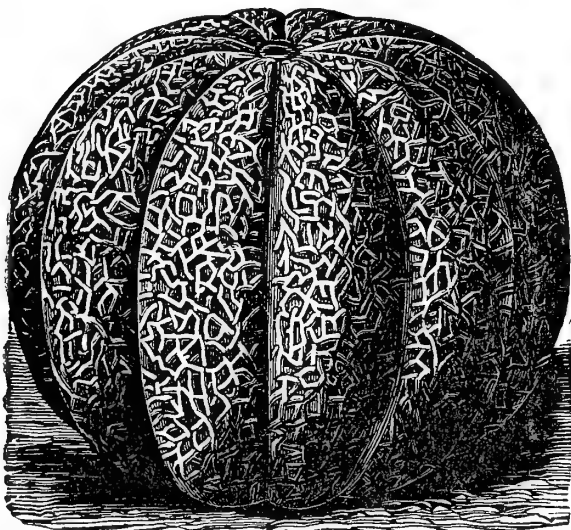

NOTE.—The Cantaloupe Crop was seriously affected in many ways the past season and the price of seed is somewhat higher than usual.

One ounce for seventy-five hills; two and a half pounds to the acre.

A rich, sandy soil is the best for the cantaloupe. Plant the seed when the ground is warm, from six to twelve seeds in hills six feet apart each way; when about three inches high thin out to leave three vigorous plants in a hill. When the shoots are a foot long pinch off the tips to branch and strengthen the vine. Thin out the fruit if it is excessive. Never plant near cucumbers, squash or other vine seeds, as the bees might hybridize the blossom and cause the fruit to take on the flavor of the former.

Burrell Gem. This might be called an improved Rockyford, except that the flesh is a golden or orange yellow. It is very meaty and has few seeds. The melon is oval in shape and very prolific; it is probably the best keeper in the cantaloupe line. Pkt. 5c., 15c. per oz., 50c. per ¼ lb., 1 lb. \$1.75.

Delicious. Similar to the famous melons produced under glass in France. It is immensely large, deep ribbed, and of the finest eating quality; the flesh is an orange yellow, and is very abundant. The variety has but very few seeds. Pkt. 15c., 60c. per oz., ¼ lb. \$1.75.

Musk Melon—Emerald Gem

Emerald Gem. One of the earliest, tremendously sweet and luscious; almost round in shape and very prolific; color deep salmon. Pkt. 10c., 20c. per oz., ¼ lb. 65c., \$2.25 per lb.

Extra Early Hackensack. A large almost round melon, deep ribbed, very sweet, green flesh; it is a large yielder and hardy. Pkt. 5c., 15c. per oz., ¼ lb. 50c., \$1.50 per lb.

Golden Jenny. Very early, oval shape, green flesh; an improvement on the old Jenny Lind, small in size. Pkt. 5c., 15c. per oz., ¼ lb. 40c., \$1.25 per lb.

Jenny Lind. Few of the older gardeners fail to still plant this sort; while small, it is very early and exceptionally sweet, flesh green, shape roundish flat. Pkt. 5c., 15c. per oz., ¼ lb. 50c., \$2.00 per lb.

Rockyford. Regarded as the best all round melon to be had. Shape oval, medium size, flesh green and very sweet. Pkt. 5c., 15c. per oz., ¼ lb. 40c., \$1.25 per lb.

Musk Melon—Rockyford

Wasser Melone (Ger.) **WATER MELON** Melon D' Eau (Fr.)

One ounce will plant about 30 hills; about 4 lbs. plant an acre.

Water melons require very much the same treatment as cantaloupes. Plant in hills eight or ten feet apart each way. To get large fruit, leave but one or two on a vine.

Cuban Queen. A striped and mottled variety, with a thin rind; the flesh is sweet, bright red, very solid; it attains a mammoth size. Pkt. 5c., oz. 10c., ¼ lb. 30c., 90c. per lb.

Citron or Preserving Melon. Excellent for preserving, etc., almost transparent when prepared; finely flavored. Pkt. 5c., 10c. per oz., ¼ lb. 30c., 90c. per lb.

Dixie. One of the old time favorites, a cross between Kolb's Gem and Mountain Sweet; produces good, medium size melons; flesh red, exterior mottled; very sweet and early. Pkt. 5c., 10c. per oz., ¼ lb. 30c., 90c. per lb.

Florida Favorite. Large oblong fruit with striped skin; of most delicious flavor; very solid meat and extremely juicy. Pkt. 5c., 10c. per oz., ¼ lb. 30c., 90c. per lb.

Halbert Honey. This variety is particularly desirable on account of its thin rind and tender, juicy meat; flesh red. Pkt. 5c., 10c. per oz., ¼ lb. 30c., 90c. per lb.

Light Icing. Flesh bright red, outside color very light green, round in shape, similar to Dark Icing, except the outside rind. Pkt. 5c., 10c. per oz., ¼ lb. 30c., 90c. per lb.

Blenheim Orange, Invincible-Scarlet, Windsor Castle. Each, per pkt., 25c.

Sutton's A1. In original packets, 50c. per pkt.

Water Melon—Dixie

Kleckley Sweets. A handsome bright red fleshed sort with light green skin; one of the best oblong varieties. Pkt. 5c., 10c. per oz., ¼ lb. 30c., 90c. per lb.

Washington, D. C., May 18th, 1910

Mr. HENRY F. MICHELL,
 Philadelphia.

Dear Sir:—Will you please send to me as soon as possible the seeds called for on the enclosed list? Mr. Hammer has delayed attending to this until it is pretty late. He tells me that of all the seeds he has had for some time, your seeds have turned out the most satisfactory.

Sincerely yours, EDWARD A. MOSELEY,

One ounce of seed will sow about 20 feet; one lb. to 300 feet

The green pods are extensively used in soups and stews, to which they add considerable zest; they are also very nutritious. Sow the seed in well fertilized ground, after the frost and cold is thoroughly out of the ground, in rows about three feet apart; drop the seed at distances of several inches apart, and thin out to allow development when growing to about six inches.

GARDEN PEAS

Peas were an extremely short crop last season and prices are some higher.

Sow one quart of seed to 100 feet of row; one and one-half to two bushels to the acre in drills.

Peas succeed best in light, dry loamy soil. Early and dwarf sorts require richer soil than the late varieties. If manure is used, let it be old and well rotted, or there will be a rank growth of vines with few pods. Sow the early, smooth, round sorts as early in the spring as the ground can be worked. Seeds of wrinkled varieties are more liable to rot if the ground is cold, and must be planted later. Sow in single rows, dwarf sorts three feet apart, and tall sorts four feet, or in double drills, six to eight inches apart, one inch apart in the drill, and not less than four inches deep, for late sorts five to six inches deep. Deep planting prevents mildew.

OUR INTRODUCTION FOR 1911

A single cluster of nine Tomatoes ripe at one time

The Finest Garden Tomato ever offered to the public. The first important result of our many trials at MICHELL'S "EVERGREEN" SEED GARDENS, AT TORRESDALE, PA.

Its "distinctive" qualities are so numerous that space will not permit us to describe all. Here are some:

1. **The earliest Tomato** to ripen in Pennsylvania. Fully two weeks earlier than any other sort tried in our gardens.
2. **A continuous bearer**, producing fruits right up till frost time.
3. **The most abundant producer** of any tomato we know.
4. **An absolutely smooth fruit**, colored equally alike in all parts.
5. **Never cracks**, except when overripe and left on vine.
6. **All fruit is of even size**, and every fruit can be used.
7. **Grows in clusters** from 5 to 10 perfect tomatoes.
8. **Fruit is of medium size** and of a brilliant rich scarlet.
9. **Fruit when cut** discloses solid meat and little space for seed.
10. **Its flavor is very agreeable** and it cannot help to become an immediate favorite with everybody.
11. **The firm flesh** makes it an ideal shipper.
12. **Altogether a "Crackerjack"** for either the home garden or the truck farm.

We highly recommend this variety for forcing under glass.

CHOICE PEDIGREED FIELD CORN FOR SEED

Our field corn is all grown in the west (with but few exceptions). From there come the finest strains procurable. That which we offer is all pedigree stock and will be found of unusual quality. The seed is all naturally dried, thus insuring perfect germination. We do not attempt to compete with the low-priced corns offered as ours is all hand picked and perfect in every respect. The ears are all carefully tipped and butted before being shelled. Plant 10 quarts per acre in hills, or three bushels per acre broadcast.

Prices subject to Market Changes.

A field of our Utah Alfalfa Seed on the farm of Mrs. Benj. W. Richards, Hammonton, N. J.

FANCY RECLEANED CLOVER SEEDS

In clovers we do not attempt to offer low-priced seed. These are usually adulterated and otherwise spurious. We aim to supply one quality, and that is the best obtainable. Our farm seed trade doubles almost every year, a fact which forces us to conclude that it pays to offer only the best.

Alfalfa (Utah Grown Seed). This grade of Alfalfa is far superior to the ordinary western grade. It is more vigorous in growth, and the seed has greater vitality. Sow $\frac{1}{2}$ bushel per acre in May or during August and early September, top dress it with manure every fall, and it will rarely winter kill. It can be cut usually three times in one season. 25c. per lb., per pk. \$3.50, \$13.50 per bu. Ask for our New Pamphlet on Alfalfa, mailed free.

TESTIMONIAL ON MICHELL'S UTAH ALFALFA

The Alfalfa I bought of you was sown on Sept. 4th. By Sept. 9th it was showing above the ground and to-day, the 24th, I have a stand three inches high. I am simply amazed at the good quality of the seed.

Elk Ridge, Md.

DR. W. R. EARECKSON.

Price, 15c. per lb., per pk. \$2.00, \$8.00 per bu.

CHOICE FARM SEEDS

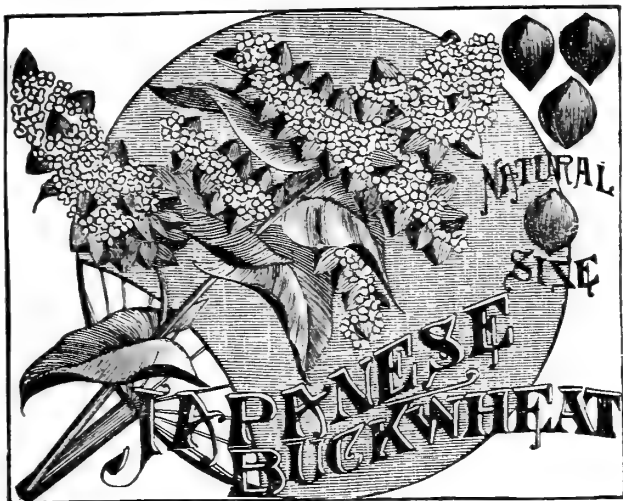

All Prices Subject to Market Changes

BUCKWHEAT

Japanese. This sort is somewhat earlier than the Silver Hull and will yield a greater amount of seed per acre. It is very valuable as a poultry food, also for feeding to game birds in districts where natural food is scarce.

Sow from June 1st to July at the rate of one bushel (48 lbs.) per acre broadcast. Price: 15c. per qt.; per pk., 40c.; \$1.25 per bu.

Silver Hull. Some growers prefer this to the above variety, claiming it will do well in most any climate, especially on poor soil. The grain is of a silvery-gray color and is smaller than the Japanese. Price: 15c. per qt.; per pk., 50c.; \$1.50 per bu.

BEANS (Early Soja)

These will be found a most excellent crop for growing on poor, worn-out soils. It is a tremendous fodder yielder and is relished by all cattle, sheep and hogs. Sow in May and June one-half bushel per acre in drills 2½ feet apart. Price: 15c. per qt.; pk., 75c.; \$2.75 per bu.

BROOM CORN

Early Evergreen. The fodder grows to be 6 to 7 feet high, producing an elegant brush of fine, straight quality. Sow 10 to 12 qts. per acre in May and June. Price: 15c. per qt.; 4 qts., 45c.; 70c. per pk.; \$2.25 per bu.

BARLEY

Manshury (Six-Rowed). Sow from June to July at the rate of 2 to 2½ bu. per acre broadcast (48 lbs.) Price: 15c. per qt.; pk., 50c.; \$1.75 per bu.

MILLET

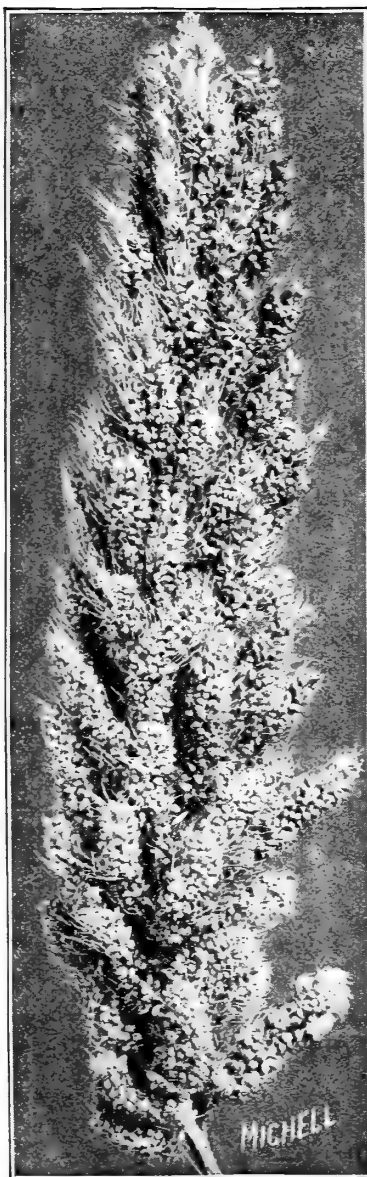

Millet is a most excellent emergency crop where hay has proved a failure. It may be sown as late as July 20th with good results.

German or Golden (Tennessee). This makes fine hay, producing large, heavy heads of seed. It grows about 4 feet in height, coming in a little later than the Hungarian. Sow one bu. (48 lbs.) to the acre any time during spring after April 10th to July 20th. Price: 15c. per qt.; per pk., 50c.; \$1.70 per bu.

Hungarian. The quality of hay produced here is somewhat coarser in texture than from the above sort; height 2 to 3 feet. Sow one bu. (48 lbs.) per acre at the same periods as above. Price: 15c. per qt.; per pk., 40c.; \$1.50 per bu.

Japanese Barnyard. This is best of all the millets, growing from 6 to 8 feet high, producing fodder of finest quality. Sow from May 10th to June 10th, 12 lbs. per acre. Cows are particularly fond of this and it will be found a very valuable food on every dairy farm. Price: 10c. lb.; 10 lbs., 80c.; \$7.00 per 100 lbs.

NOTE.—Common Millet is offered and sold by many dealers as German Millet. The seed bears sufficient resemblance to German Millet to deceive inexperienced purchasers, and to make the prices asked by other houses for the true German Millet seem unreasonable. Do not buy German Millet without the full assurance that it is Tennessee or southern-grown seed.

A WORD ABOUT GOOD FARM SEEDS

It is frequently an objective point in buying an article to buy the lowest priced. In farm seeds this does not pay. The margins of profit are extremely small at their best, and no reputable merchant will ask higher prices than his costs warrant. However, do not look at price when buying farm seeds; look for quality. Results are what count, and these can be had from any farm seeds we sell.

In ordering Farm Seeds, always allow 22 Cents for each Two-Bushel Bag.

FARM SEEDS—Continued

CANADA FIELD PEAS

Excellent for fodder or for plowing under. Sow in March or April, $2\frac{1}{2}$ to 3 bushels (60 lbs. per bushel) per acre, broadcast, harrowing them over several times so they may be thoroughly covered. They will be ready for cutting or turning under as green manure by June 10th. Price, 10c. per qt., per pk. 55c., \$2.00 per bu.

COW PEAS

Cow peas are gradually becoming recognized as a necessary crop on every farm. They are most economically applied when used as a green manure. In other words, they are valuable as a soil restorer and nitrogen gatherer. The fodder is excellent when fed either green or dry, it being claimed to be more nutritious (and preferred by cattle) than hay. Sow from May 1st to July 1st, 2 bushels per acre, broadcast; in drills, 1 bushel.

Black Eye (Southern). A later maturing variety, producing long fodder. Price, 15c. per qt., per pk. 85c., \$3.00 per bu.

Black. An early variety, producing shorter fodder than the above sort. Price, 15c. per qt., per pk. 85c., \$3.00 per bu.

Whip-poor-Will. One of the quickest sorts to mature, growing upright; a heavy cropper and easy to harvest. Price, 15c. per qt., per pk. 85c., \$3.00 per bu.

Wonderful, or Unknown. A trailing variety; late but a tremendous producer. 15c. per qt., 85c. per pk., \$3.00 per bu.

NOTE.—Where Cow Peas are desired to be cut as fodder, the long varieties should be sown. For turning under, the short sorts will be found practical. For a large crop of Cow Peas, sow the seed as late as possible and not too thick.

SUGAR CANE OR SORGHUM

Early Amber. This makes an elegant fodder, both in green and dry state, for horses and all cattle. The seed may also be fed to poultry and other birds. Sow 25 lbs. of seed per acre, from May to June, in drills or 2 bu. broadcast. Price, 15c. per qt., per pk. 65c., \$2.25 per bu. (48 lbs.).

VETCHES OR TARES

These are grown very extensively in Europe for stock feeding in the form of fodder, or the seed when harvested may be fed to fowls. As a restorative crop it is of great value, furnishing humus to the soil when it is plowed under.

Winter Vetches. Sow in August and September, $\frac{1}{2}$ bushel per acre, broadcast. They may be harvested or plowed under several weeks earlier than Crimson Clover the following spring and the ground used for other crops. Price, 12c. per lb., 10 lbs. for \$1.10, \$6 per bu. (60 lbs.), 100 lbs. \$9.00.

Spring Vetches. Used similar to the above variety, requiring, however, a larger quantity per acre for sowing. Sow in May or June, 1 to 2 bushels broadcast or $\frac{3}{4}$ to 1 bushel in drills. Price, 10c. per lb., 10 lbs. 75c., \$3.25 per bu. (60 lbs.), per 100 lbs. \$5.00.

HARDY ANNUALS AND BIENNIALS

All varieties under this heading may either be sown in the house from March till May or outdoors after danger from frost is over, as indicated with each variety. They will flower the same year. Annuals serve only for one season, while Biennials if protected with leaves during winter will revive and flower once more after which they die. Biennials may also be sown during mid-summer, when they will establish themselves and flower the following spring. In this class we find Pansies, English Daisies, Forget-Me-Nots, etc. Biennials which will not flower the first year from seed are classed by us among Perennials. Always refer to our *Complete Flower Seed Index* when in doubt.

For Novelties, see pages 6 to 12. Please use numbers when ordering.

MICHELL'S SUPERB ASTERS

We can imagine no other flower which combines so much beauty with grace and usefulness and with which more brilliant effects can be achieved. From July till September this flower reigns supreme in the garden, not equalled by any other. For these obvious reasons we give, perhaps, more attention to these flowers than any other and are in position to offer our patrons remarkably fine strains, producing perfect flowers of great beauty. Many of the strains we offer are grown under our own supervision by specialists in this country, others are imported from most reliable sources. To have early flowers sow the seed in the house from March till May; otherwise sow outdoors after danger from frost has passed.

New Crego Aster

251 NEW ASTER, LADY ROOSEVELT

We can truthfully claim that this is the finest of all Asters. The flowers resemble huge incurved Chrysanthemums; the color is a gorgeous pink, of marvelous beauty. The robust plants produce stout stems invariably 40 inches long, crowned with gigantic flowers. The seed we offer is selected from original specimen and then re-cleaned; so it must give absolute satisfaction. Large pkt., 65c.; pkg., 25c.

EARLY WONDER ASTER

Indeed the earliest of all Asters. The form is that of "Giant Comet" type; the flowers are large and very double; stems average 18 inches.

ASTERS

To do well, require a well pulverized soil, always kept open by continuous cultivation. If soil is heavy and mostly composed of clay, it is well to mix sand with it.

NEW CREGO ASTER

Our illustration can do but partial justice to this grand flower. The twisted and curled petals give the flower the appearance of a huge flat chrysanthemum. The flowers are the largest of any Aster we know of; often measure 5 inches in diameter. The strong erect stems average 20 to 24 inches in length. Though the flowers are large they are produced in abundance.

MICHELL'S IMPROVED SEMPLER'S BRANCHING ASTER

This is the finest late Aster we can recommend. The deep, heavy incurved flowers are borne on rigid stems often 2 feet and more in length. The colors are superb and can be used to advantage as a cut flower. What we offer is not the aster which is usually known by that name, but something much superior, as we are extremely critical in the selection of specimen for seedling. During the past season we have received numerous testimonials on the strength of the quality of this aster.

MICHELL'S GIANT PANSIES

Pansy—Michell's Giant Exhibition

Strictly considered, this is a biennial, but the fact that it flowers the first season from seed recommends it for an annual. There are actually three seasons in which pansies can be planted. If started in the house from February till April pansies will begin to bloom from July on; sown outdoors in May beautiful flowers are produced in the fall; sown in frames during July and August and transplanted later gives us the main crop of flowers the following spring. Pansies thrive best in moist semi-shady situations.

Stokesia. (See page 80 A)

There are far too few fragrant flowers, particularly when the fragrance is pleasing; stocks enjoy the reputation of having the most pleasing fragrance save the violet; some varieties are splendid for borders, others for cutting and some for both purposes. To get the best results, sow from February till April in the house and transplant to small pots before setting out. The seeds we offer are hand-saved from pot-grown specimen and will produce a large percentage of double flowers.

MICHELL'S "NEW SPENCER" SWEET PEAS

THE TRIUMPH OF HORTICULTURE

Nothing within recent years can approach in importance the introduction of the "Spencer" Sweet Peas. Though but few years old they revolutionize all former conclusions. The characteristics of this new type is: (1) Enormous flowers (often measuring 2½ inches across) with exquisitely wavy petals. (2) Invariably four flowers to the stem. (3) Stems averaging 12 to 15 inches in length. (4) Plant, foliage, stem and flower of extraordinary robust health. Six sprays of this new Sweet Peas out-strip in appearance 25 sprays of the older kinds.

Hardy Perennial or Old Fashioned Flowers

Under this heading we have classified all plants which require the following cultural directions: Sow outdoors from June till September in well prepared seed beds, keep beds partially shaded until seeds have germinated; transplant late in fall into their permanent quarters and protect during winter with a light litter of straw or leaves. They will flower and perfect the second year and reappear each successive year in better grandeur. They have become extremely popular of late years, reviving the old-fashioned gardens of grandmother's time. With a proper assortment and a single planting one can build an effective garden to last for years without additional expense. For a complete assortment of plants, see pages 97 to 104.

Do not plant caladiums outdoors until after May 1st, but to get them in early growth, they may be started in doors.

SENSATIONAL

NEW DAHLIAS

It is truly said that there is nothing impossible under the sun and one can fully realize this when one first sees the newer forms of Dahlias. Some horticulturists term them artistic, some fantastic, others orchid-flowered—again, others clematis or paeony-flowered. The latter name seems to be most general. No one can deny the fact though that these newer Dahlias have a place strictly their own. They flower abundantly during the entire season; produce gigantic flowers on erect, very long stems, are ideal for cutting or garden decoration. The form resembles more that of a semi-double Japanese Paeony; some varieties are quite fragrant. The varieties mentioned here are of very recent introduction, extremely choice and rare and selected with utmost care. We furnish **young plants only** of these choice novelties, and to those who are not acquainted with the nature of Dahlia plants we wish to say that all experts on this subject declare them to be more satisfactory than roots. **We guarantee satisfaction** with our plants if properly cared for. Plants ready May 1st.

HARDY GARDEN LILIES

What garden could be called complete without a fair display of these stately flowers. Their graceful habits, their ability to adapt themselves to special locations and the variety of them to have flowers almost the entire year makes them very valuable. Their culture is simple yet a few rules must be strictly observed to make them grow successful.

All lilies should be planted from 6 to 8 inches deep, the Japanese varieties even 12 inches deep, the bulbs themselves should be

Lilium Auratum Platyphyllum

completely enveloped in sand; no manure should come in contact with the bulb, but may be placed 4 to 6 inches underneath, all loose petaled bulbs should be planted on their side instead of upright. Please observe where we mention special locations.

In winter all lilies should have a protection with leaves.

Wild gardening, a feature becoming popular of late, gives lilies the foremost place.

HARDY PERENNIAL PLANTS

There is hardly a flower lover to-day who does not, with some amount of pleasure, recall the many beautiful old-fashioned flowers grandmother used to grow. They require little care and once planted reappeared each year in grander beauty. Those are the hardy perennials we offer here. Their popularity is increasing in many ways. Their value in gardens is shown effectively when planted in masses, say from 12 to 50 specimen in one spot. A variety can be planted in such a manner as to have some bloom from April till December. Once planted they invariably live forever and steadily increase.

We gladly submit suggestions in laying out perennial borders or complete hardy gardens. No charge for this service.

Michell's Gorgeous Paeonies

This "Queen of Spring" holds a place entirely her own in effective gardens. We have had several requests of late to execute special Paeony gardens showing the well-deserved popularity of this flower. The exquisite form, the delicate and rich colors, its value as a garden or house decoration, and the delightful fragrance are all points to tell in its favor. No disease or insect ever troubles this plant. The best effect of Paeonies is attainable when massed by themselves in groups on lawns with a distinct background of shrubbery. HYBRID TEA ROSES

This class of roses deserves all the praise bestowed upon it. With proper care they will flower uninterruptedly from June till frost, and by that we do not mean sparingly but in profusion at any time. HARDY CLIMBING PLANTS FOR TRELLISES, PORCHES, ARBORS, Etc.

Climbing vines are as necessary to the comfort and beauty of a home as the trees and shrubs we plant about it. They mature quickly and tone down the stiff, bold angles of new buildings, and give shade and flowers over the porches and trellises. They are cheerful and cooling in climbing over bowers and summer-houses, and wild and natural in running over trees and stumps. Vines are strong, robust growers that require little attention other than to occasionally train them.

All plants under this heading are furnished by us growing in pots, and may be transplanted at any time of the year with absolute success.

COMBINED HILL AND DRILL SEEDER, WHEEL HOE, CULTIVATOR AND PLOW

This is the most popular combined tool made. It combines in a single implement a first-class hill-dropping seeder, a single Wheel Hoe or weeder, a cultivator and a plow. The hopper holds 2 quarts of seed, which can be sown in continuous rows, or dropped in hills at 4, 6, 8, 12 or 24 inches apart.

The drill is detached and the tool frame substituted by removing but one bolt. It then becomes a single wheel hoe. It is useful almost every day in the season, at every stage of the garden work. With this one implement the small farmer can do practically all the work in his small crops. See price at top of opposite side of this page.

This is a new tool for 1909, which will give excellent satisfaction. The discs are also adjustable for depth and to throw to or from the row as desired.

The tooth next to the row is narrow and is arranged to run shallow, the middle tooth is wider and runs 1/2 inch deeper, while the outside tooth is very much wider and runs 1/2 inch deeper still, so that the work is finer and more delicate next to the row, to avoid injury to the roots of plants, and deeper in the center. The teeth are also set out of line from front to back, which makes them work with greater freedom.

The plows are the regular Planet Jr. model and are continually valuable for furrowing and covering, for plowing away and plowing back as required.

HILL AND DRILL SEEDER

This Seeder is the latest and most perfect development of the hand seed drill. It sows evenly in drills, and also drops in hills at 4, 6, 8, 12 or 24 inches apart. It is thrown out of gear instantly by moving a convenient lever, or the flow of seed is stopped by pushing down the feed rod. No time is lost, no seed is wasted. It is quickly set to sow the different kinds of seeds in the exact thickness required.

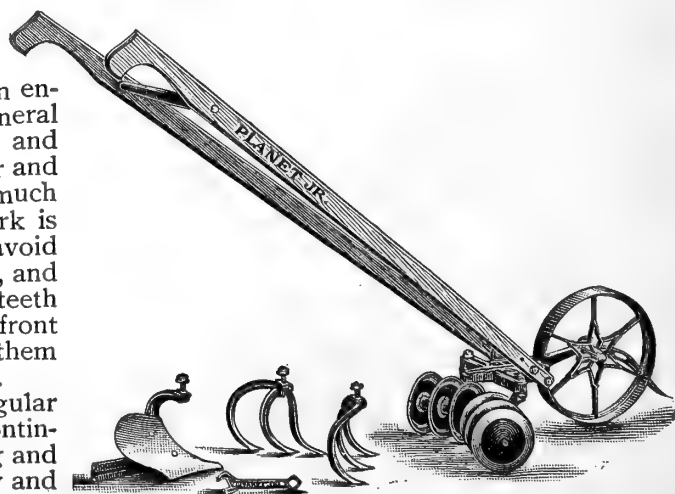

The accurate hill-dropping drill, which gives a regular stand of plants with the least seed, saves its cost over and over again in seed alone. We guarantee this drill to be accurate and give satisfaction in every respect.

" as a Drill Seeder only..... 8.00

Similar to the No. 6 Combined Double Wheel Hoe, Hill and Drill Seeder. It only differs in the seed sowing device and opening plow. Both tools as Double and Single Wheel Hoes are identical. The seed sowing device of our No. 4 is only designed to sow seeds in continuous rows.

Advance Drill

The increased use of commercial fertilizers has fairly compelled the farmer and planter of the present day to provide himself with improved appliances for properly and economically distributing these adjuncts of modern farming.

We claim the "Advance" to be the best low-priced distributor on the market, and would call attention to its distributing disc of galvanized iron, which can neither break nor rust; also to the wrought iron wheel, which is light and strong.

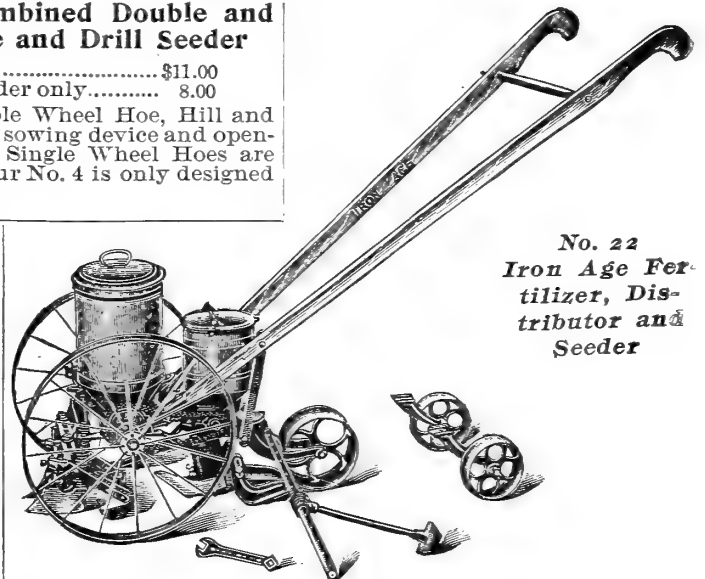

A shut-off, to prevent the escape of fertilizer when wheeling around end of row, is a late improvement; being one of those little things which go far, however, in making a tool valuable.

A first-class tool for the drilling of peas and corn.

Price, each.....\$6.75

When the man whose gardening is confined to the back yard reads that 1,600 pounds per acre is the correct proportion in which to use a certain fertilizer, he gets but a vague idea of the quantity to apply to his 5-ft. square bed of lettuce. The table below shows the quantity of fertilizer required to be used on a plot 1 yard square, a space 3 x 3 ft. However any space can be readily figured by using this rate of application.

NITROGEN-GATHERING BACTERIA

The thought that nitrogen-gathering bacteria does assist leguminous plants, such as clover, peas, beans, etc., in making rapid, vigorous growth is no longer mere talk. Many exhaustive experiments have been carried on and it has been proven, beyond a doubt, that they are of great value. It works in the soil and on the roots of leguminous plants, having the power to collect free nitrogen from the air and supply it to the plants. All plants need nitrogen, which is very costly obtained otherwise.

Some of the most successful stands of Alfalfa, Red Clover, etc., are attributed directly to the fact that they were treated with these cultures. It is of great importance that the directions which will be found on each package be carefully followed to insure success. There are several other cultures on the market but the two offered below we consider the best.

We cannot urge too strongly their general use, on account of the many excellent reports that have been made to us.

This illustration shows two lima bean hills one treated with Bacteria, the other not so treated.

PRAIRIE STATE INCUBATORS AND BROODERS

The Incubator offered here is to-day the most successful, the largest seller, and surest hatcher of any. Its reputation has not been built up quickly like some who have since retired into the field of unusefulness. The Prairie State user is always sure of his money's worth and that he will not have a lot of annoying worry attend the incubation of eggs. The Prairie State is as faultless as it is possible to make incubators. This is attested by our increasing large sales, and that we never have one returned as unsatisfactory. They all make good.

No. 3 Colony Brood House

THE UNIVERSAL HOVER

The name implies correctly what the Hover is. It can be attached to any old box, piano case or a brooder you may be using at the present time. Just the thing for one who wants the least expensive but at the same time most efficient brooding device. For equipping large or commercial poultry plants these will be found invaluable.

PRICES

Universal Hover, with lamp box, complete without regulator. \$7.00

Universal Hover, without lamp box, complete without regulator 6.00

REGULATOR. This attachment can be put on the Hover at any time, it can be set to automatically regulate the temperature of the Hover to any desired degree. Price, \$1.00 extra.

PRAIRIE STATE COLONY HOUSE BROODERS

With a portable colony brooder the location of a colony may be changed at pleasure. When the soil becomes worn out or the grass in the run well eaten down, if the location proves unhealthy or has become infected with disease or vermin, the removal of a portable colony brooder is an easy matter, and the birds can be given new quarters on fresh soil and amid new surroundings at almost no expense aside from the labor involved. Prairie State Colony Brooders are all equipped with the famous Universal Hover.

To transform the Combination Brooder into a Colony House in the No. 1 and No. 2 style, slip out the middle partition, remove the hover and lamp, and you have one of the neatest colony houses that could be built. The roofs are tin, the woodwork is all tongued and grooved and absolutely weather proof.

(The No. 3 Colony House has but one compartment.)

The Combination Brooders are shipped knocked down to save freight. They are put together with screws and hooks, and are easily and quickly assembled.

"TARGET BRAND" WEED KILLER

is a most effective solution of high grade chemicals, combined by secret process. The dilution is 1 to 50 parts of water made so easily that a boy or child can attend to it. A remedy that not only reduces the amount of labor, but does it at about one-tenth the cost. A gallon diluted is sufficient to cover a space of 100 to 150 square yards.

Application is best made with a watering can to insure uniform distribution, the most advisable time being after a rain, which is when weeds start to sprout and grow. "Target Brand" Weed Killer effectively destroys the roots as well as the top growth, and single applications last almost an entire season.
